	Q18]	what happens in XP planning phase.
	Ans:	

XP Planning begins with creation of set of stories called as user stories that describes features & functionality of s/w development.

Each story is written by the customer and is placed on index card.

Customer assigns values to it. based on business values of the feature / function.

Then agile team assess each story and assigns cost.

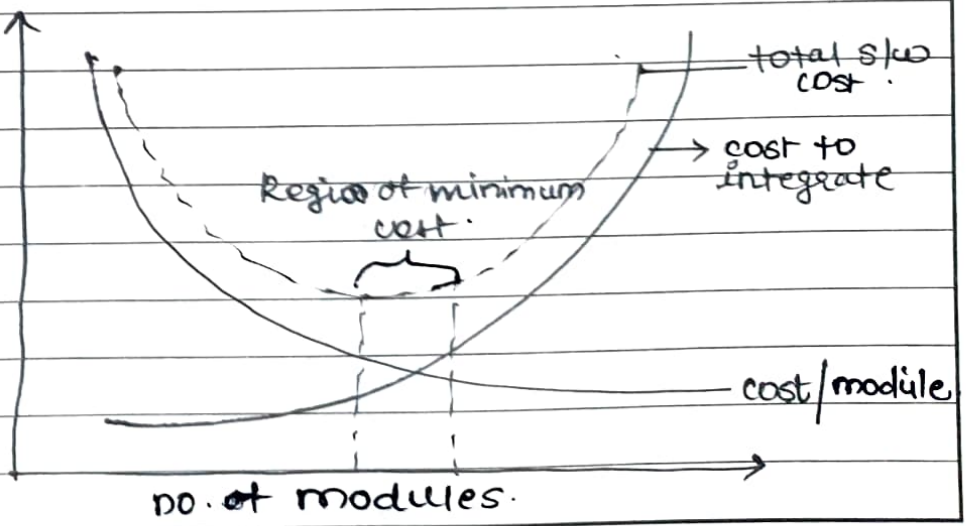

New stories can be written at any time. and added or removed.

Stories are grouped to for a deliverable increment

After first increment project velocity is used to define subsequent delivery dates for other increment

	Q1C	What is modularity.
	Ans:	Software is divided into separately named and addressable components sometimes called modules, which are integrated to satisfy problem statements.
		Modularity is the single attribute of a s/w that allows program to be intellectually managable.
		It leads to divide and conquer strategy.
		However as the no. of modules grow, the effort (cost) associated with integrating the modules also grows.
